management and risk of subsequent pregnancy.
In alignment with the CME mission of the Keck School of Medicine, programs are planned in the context of attributes 1, 2, 3, 5 & 10. Faculty members have completed disclosure forms and potential conflicts of interest have been identified. The Keck School of Medicine of the University of Southern California designates this live activity for a maximum of 7.5 AMA PRA Category 1 Credits. Physicians should only claim credit commensurate with the extent of their participation in the activity. The Keck School of Medicine of the University of Southern California is accredited by the Accreditation Council for Continuing Medical Education to sponsor continuing medical education for physicians. The Keck School of Medicine of the University of Southern California designates this live activity for a maximum of 7.5 AMA PRA Category 1 Credits. Physicians should only claim credit commensurate with the extent of their participation in the activity. The California Board of Registered Nursing accepts courses approved for Category 1 credit as meeting the standard of relevance to pharmacy practice and have been approved by the AMA for Category 1 credit. Pharmacists licensed in States other than California should inquire with those State boards to determine their requirements. The program and objectives have been developed in the context of attributes 1, 2, 3, 5 & 10. The program is designed to educate cardiologists, internists, primary care physicians, pharmacists and other healthcare providers by presenting evidence-based information, published guidelines and the latest advances in the diagnosis and management of various cardiovascular diseases. Participants will be able to:

1. Identify the management strategies for patients with heart failure, hypertension, arrhythmias and valvular heart disease.
2. Discuss the importance of patient education and counseling in the management of heart failure.
3. Select the appropriate therapy for the high risk patient with hypertension.
4. Troubleshoot pacemakers and implantable cardioverter-defibrillators.
5. Discuss the role of antiplatelet and anticoagulation therapy in the prevention of thromboembolism in patients with heart failure.
