# The Israeli ICD Registry- Update

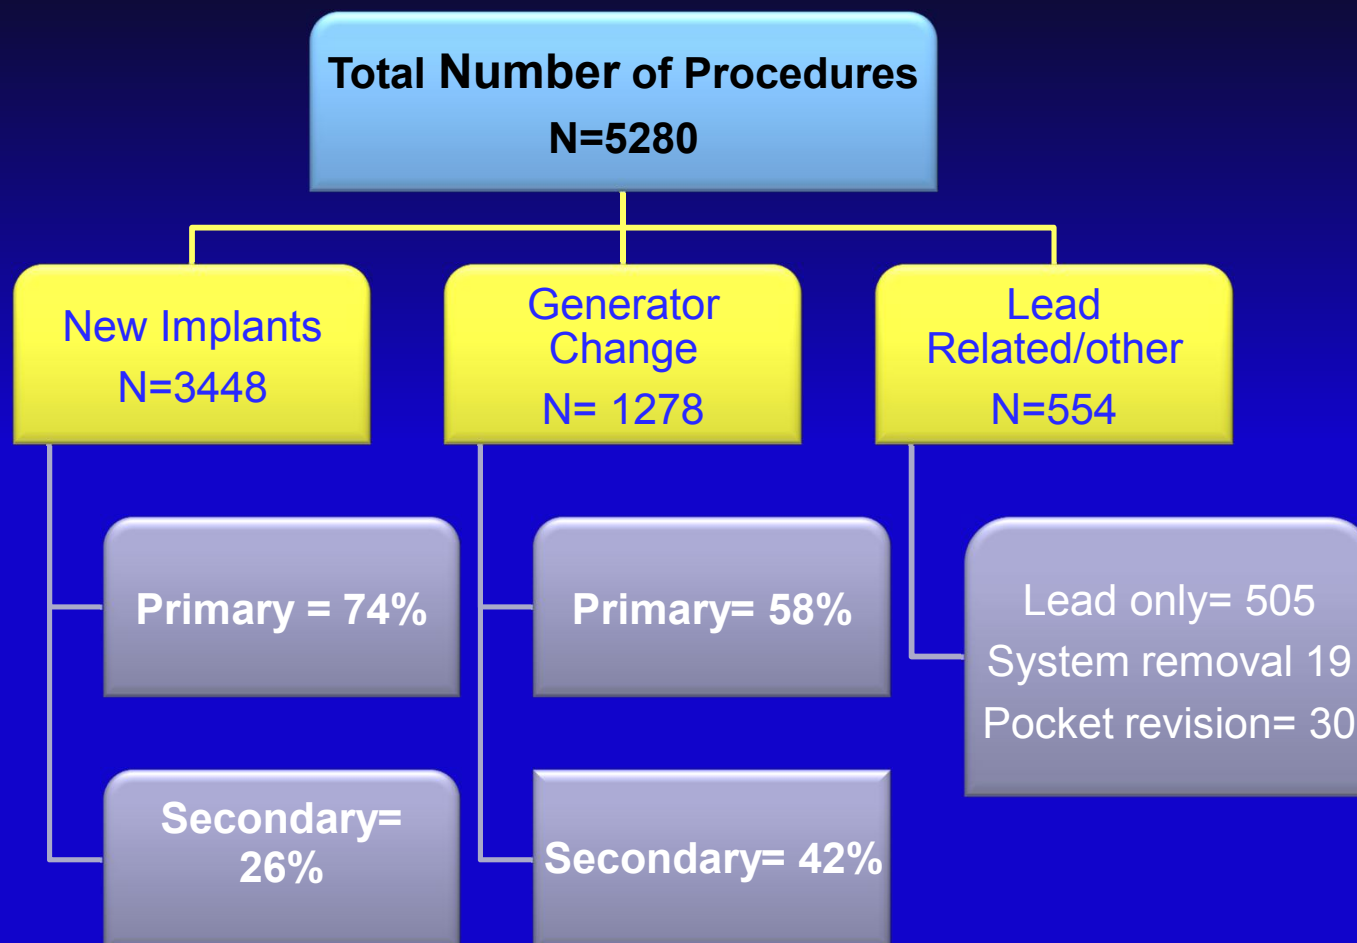

**Mahmoud Suleiman MD**

On behalf of the Israeli ICD Registry Scientific Committee

Jan 11, 2013

## Jul 2010-Dec 2012

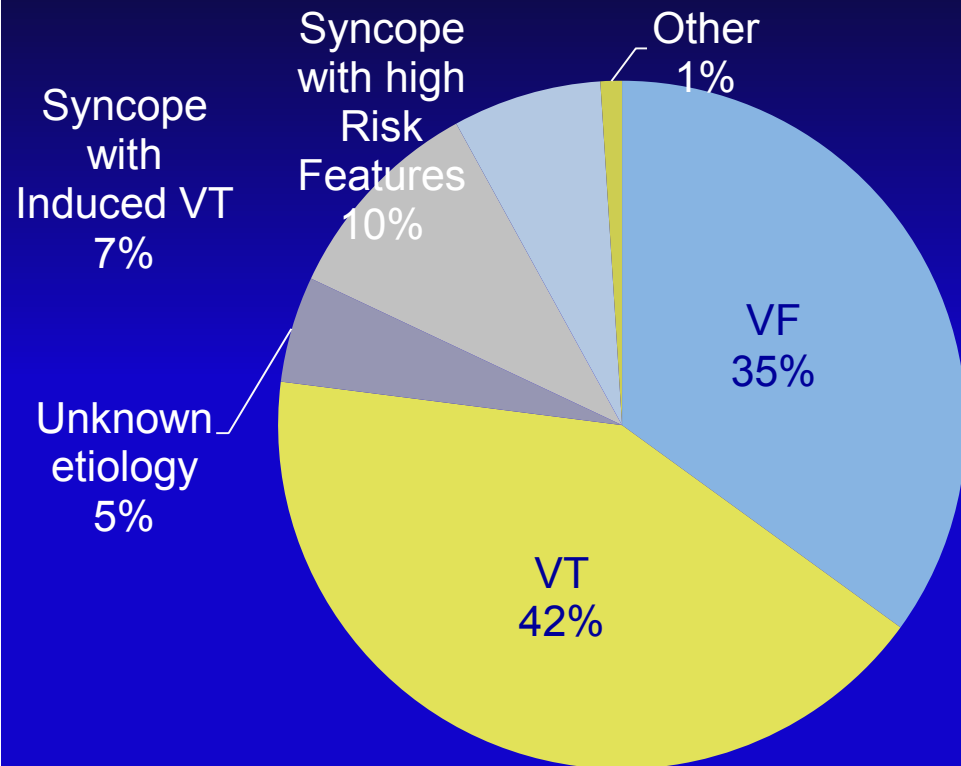

# Reason(s) for ICD Implantation

## Primary Prevention

## Secondary Prevention

## Baseline Characteristics of New Implants

variable	All n= 2388	Primary n= 1743	Secondary n= 645	P
Age	64±13	64±15	64±12	0.86
Female	17	18	16	0.4
Old MI	64	65	63	0.3
< 40 days	8	6	13	<0.001
Non ischemic CM	22	25	14	<0.001
HCM	6	6	7	0.3
ARVD	0.6	0.3	1.5	0.001
Primary Electrical Disease	3	1.4	8	<0.001
Atrial Fibrillation	21	20	22	0.44
Diabetes Mellitus	36	38	31	0.003
Hypertension	60	61	56	0.04
Dialysis	2	2	2	0.9
Smoking	31	30	32	0.57

## Device Type

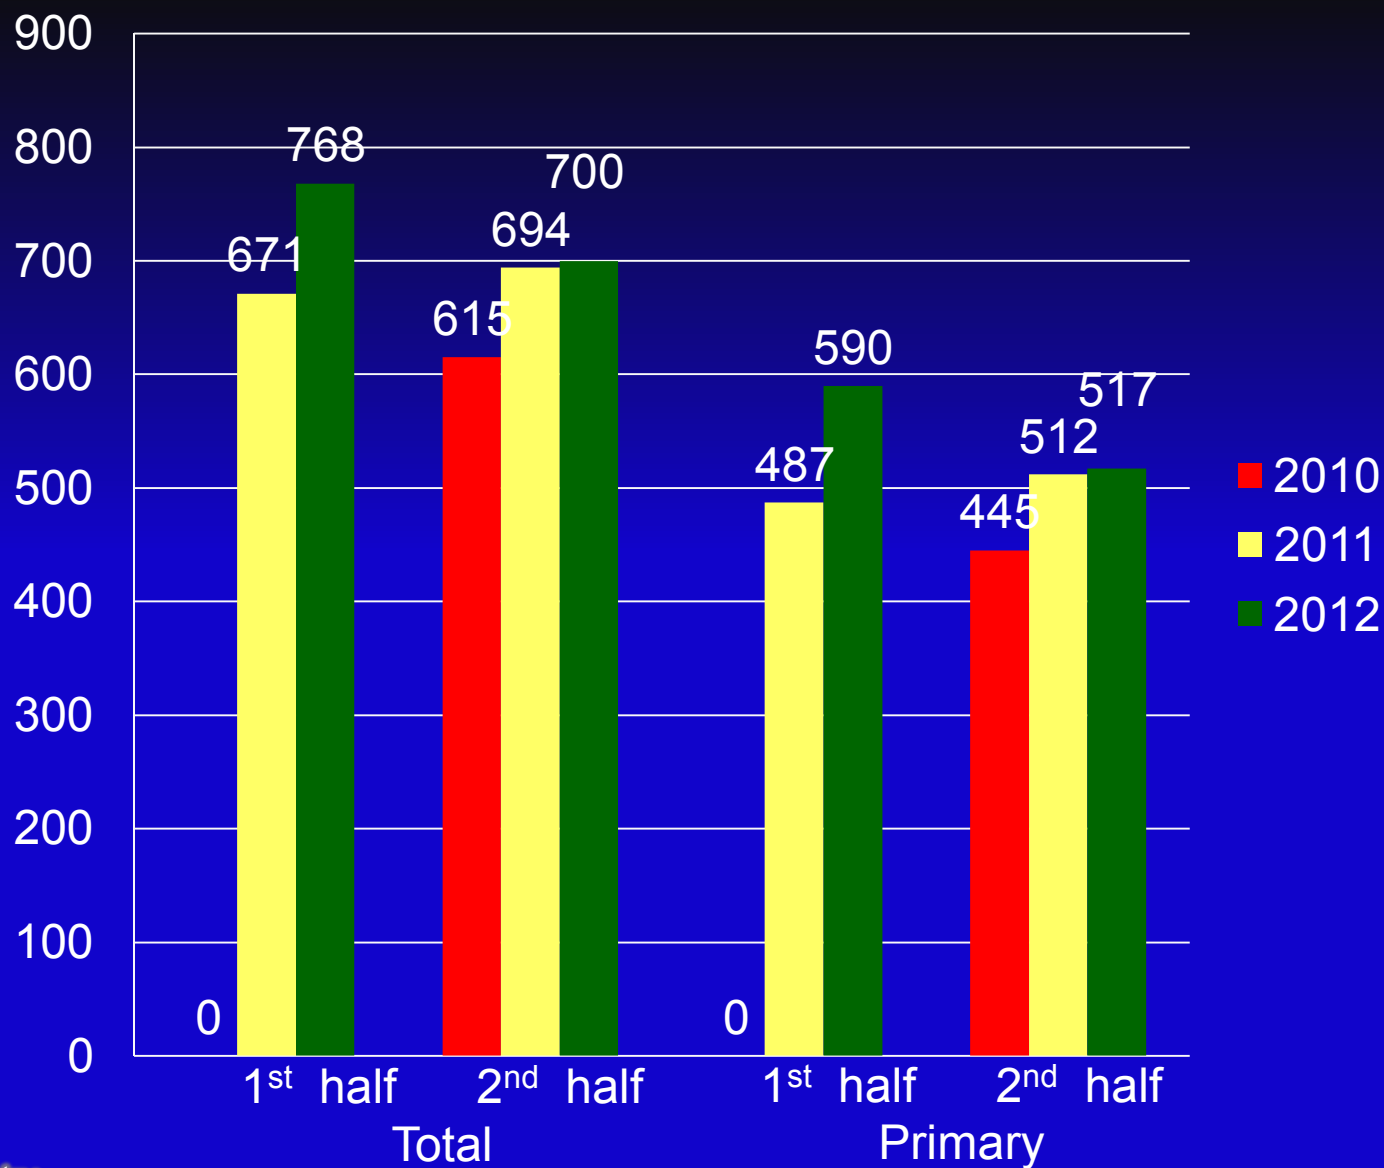

## Device Type and Gender

## Trends of New Implants

# Follow-up Studies

Hello, ADMIN ADMIN

## Follow-up

**Patient Details** | Center: Rambam | Patient Identifier: 23288095 | Last name: Abu Tarif | First name: Hamad | Year of Birth: 1968 | Sex: Male

### Follow-up

\*Date Information Obtained:

\*Center:

#### Information obtained through

Check-up at the clinic:  No  Yes

Patient's file / Hospital records:  No  Yes

Other interview:  No  Yes

#### Deceased Information

\*Deceased:  No  Yes  Lost to follow up

Death date:

Reason:

Death in hospital:  No  Yes  Unknown

#### NYHA

Last known NYHA Functional

### First Therapy Delivered by Device Since Last FU

First Appropriate **Therapy**:

No  Yes  Unknown

Therapy type:

Date of 1st appropriate therapy:

date unknown:  Yes  No

First Appropriate **Shock**:

No  Yes  Unknown

Date of 1st appropriate shock:

date unknown:  Yes  No

First Inappropriate **Therapy**:

No  Yes  Unknown

Therapy type:

Date of 1st inappropriate therapy:

date unknown:  Yes  No

Cause:

First Inappropriate **Shock**:

No  Yes  Unknown

Date of 1st inappropriate shock:

date unknown:  Yes  No

### Additional Therapies Delivered by Device Since Last FU

Appropriate:

No  Yes  Unknown

ATP:

No  Yes  Unknown

### Hospitalization since last FU

Any Hospitalization:

No  Yes  Unknown

#### Reason

CHF:

No  Yes  Unknown

Number

Date of 1st hospitalization

Date unknown

Yes  No

Device related:

No  Yes  Unknown

Yes  No

Arrhythmia:

No  Yes  Unknown

Yes  No

Other (Cardiac):

No  Yes  Unknown

Yes  No

Non Cardiac:

No  Yes  Unknown

Yes  No

### Last Creatinine

Blood drawn:

No  Yes  Unknown

Last Creatinine:

mg/dL

Date of last creatinine:

Comments of Follow-up:

## Completed Sub-studies

<b>1. Sex Differences in Implantable Cardioverter Defibrillator Implantation Indications and Outcomes: Lessons from the Nation-wide Israeli-ICD Registry</b>	<i>Guy Amit</i>
<b>2. Role of defibrillation threshold testing prior to ICD implantation</b>	<i>Moti Haim</i>
<b>3. Renal Function and Clinical Outcomes of Patients Undergoing ICD or CRTD Implantation</b>	<i>Moti Haim</i>
<b>4. Prognostic Value of Programmed Electrical Stimulation for Primary Prevention Implantable Cardioverter-Defibrillator Implantation</b>	<i>JE. Schliamser</i>
<b>5. Clinical Characteristics and Outcomes of Elderly Patients Treated with ICD and CRTD in a Real World Setting</b>	<i>M. Suleiman</i>
<b>6. Outcome of Patients with Advanced Heart Failure who Receive Device-Based Therapy for Primary Prevention of Sudden Cardiac Death</b>	<i>M. Suleiman</i>

# Suggested sub-Studies

1. **Outcomes of Patients who Received Appropriate Shocks as Compared to Patients who Received Inappropriate Shock or no Shock**
2. **Is Dual-Chamber ICDs Associated with Increased Long Mortality when Compared with Single-Chamber Defibrillators: a subanalysis of the Israeli ICD Registry?**
3. **Do Patients with End-Stage Kidney Disease Benefit from Prophylactic ICD Therapy ?**
4. **Syncope Significance in Patients Implanted with ICDs for Primary Prevention of Sudden Death**
5. **Development of Models for the 6 Months and one Year Mortality after ICD Implantation**

# Suggested sub-Studies

6. Frequency of inappropriate shocks in patients with single vs dual chamber ICD
7. Rates of upgrade of plugged CRT-D device to full CRT in clinical practice and the potential clinical and economic impact of the use of plugged CRT-D device at initial implant
8. Impact of lead or pocked revision on clinical outcomes in patients with ICD/CRTD
9. Prospective Comparison of Clinical Performance and Survival of Different Transvenous Defibrillation Leads
10. Atrial fibrillation (new, paroxysmal and chronic) and outcome in patients implanted with ICD/CRTD

# Suggested sub-Studies

**11. Outcomes in CRTD Recipients with Atrial Fibrillation**

**12. Outcomes in ICD recipients who have pacemaker indications**

**13. Racial disparity in the utilization of implantable cardioverter-defibrillators and Cardiac resynchronization therapy among Israeli patients**

**14. Outcomes in ICD recipients with Genetic inherited arrhythmogenic disease in the real world settings**

# **Clinical Characteristics and Outcomes of Elderly Patients Treated with Implantable Cardioverter-Defibrillator and Cardiac Resynchronization Therapy in a Real World Setting**

## HF OR DEATH (COMBINED) BY AGE GROUPS

### Total Population

P(log\_rank) = 0.04

Event-free Survival

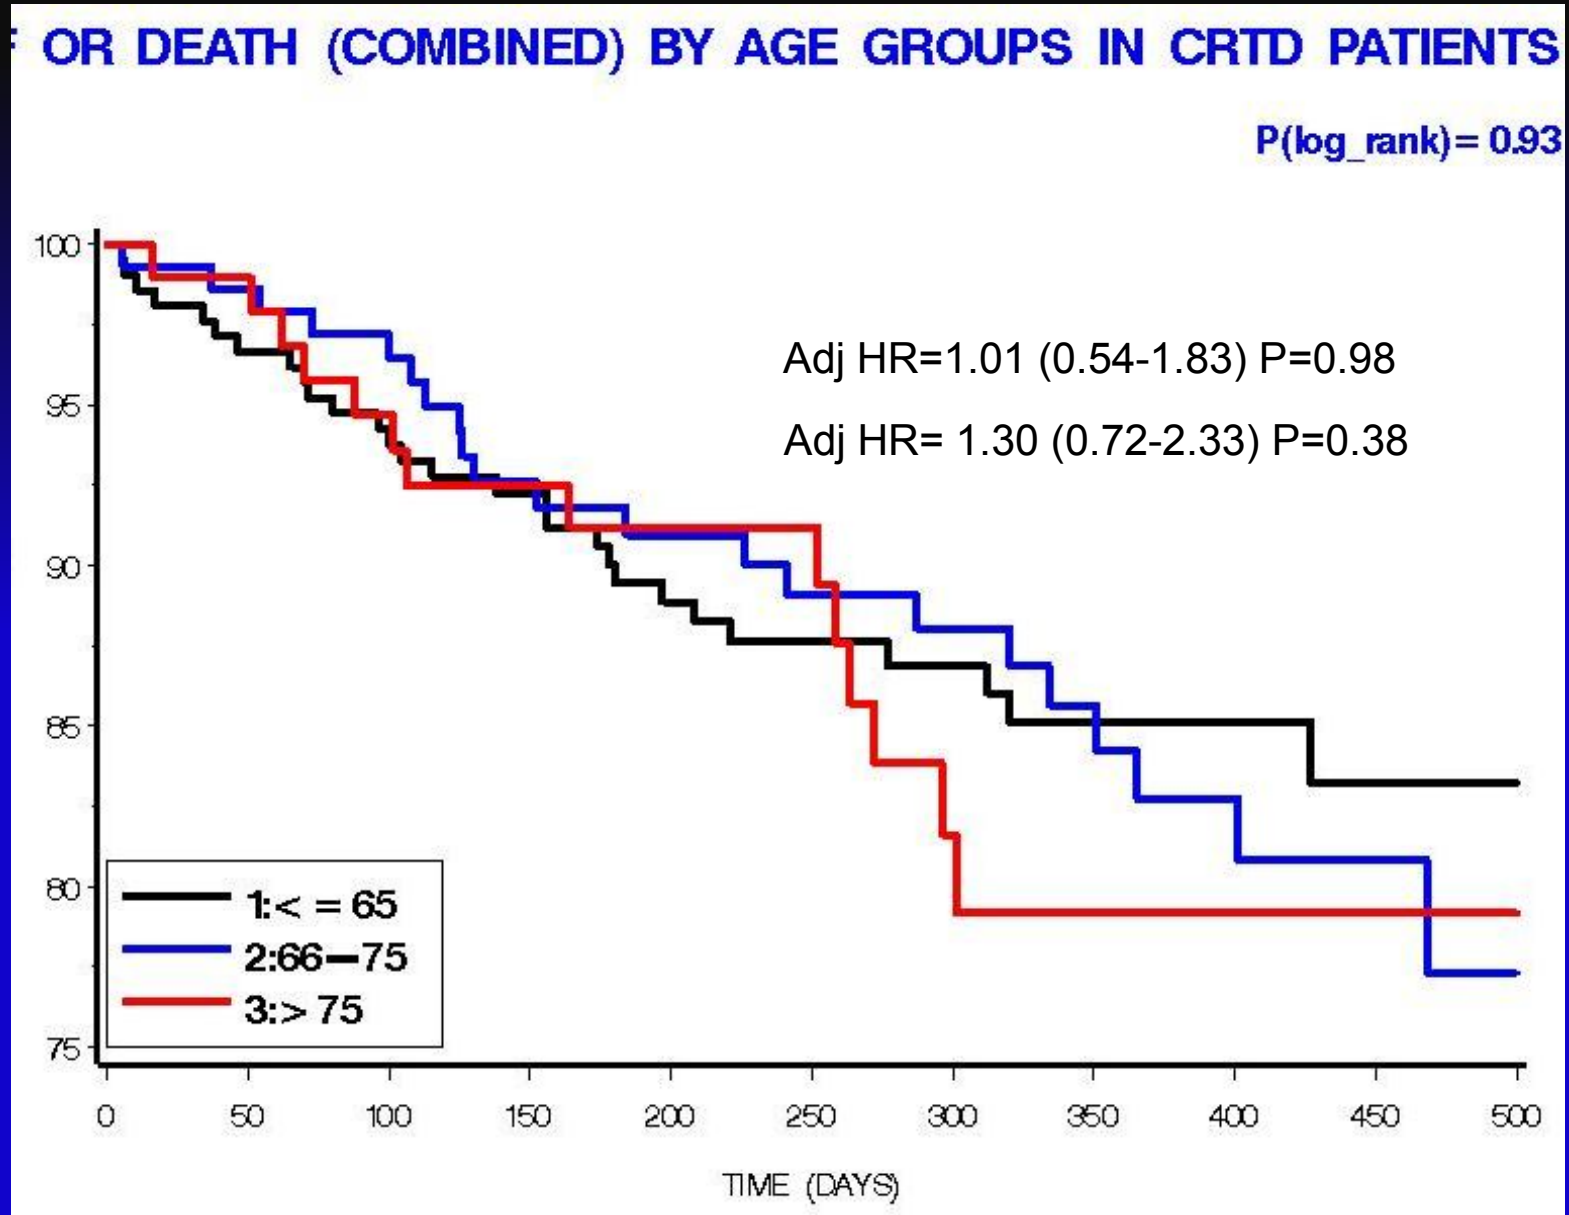

## EVENT-FREE SURVIVAL OR DEATH (COMBINED) BY AGE GROUPS IN ICD PATIENTS

$P(\log\_rank) < 0.0001$

Event-free Survival

## VTVF OR DEATH (COMBINED) BY AGE GROUPS

P(log\_rank) = < 0.001

## LETHAL OUTCOME BY AGE GROUPS IN CRTD PATIENTS

$P(\log\_rank) = 0.75$

## REINTERVENTION BY AGE GROUPS

P(log\_rank) = 0.70

# Major Findings

- >50% of new implants are in patients >65 yo and >20% in patients >75 yo
- Elderly patients have a higher risk profile and were more likely to receive CRTD device and have their device implanted for secondary prevention indication
- Elderly patients had a similar low re-intervention rate as younger patients.
- The risk of both HF and arrhythmic outcomes was attenuated among elderly patients implanted with CRT-D devices.

# **Outcome of Patients with Advanced Heart Failure who Receive Device-Based Therapy for Primary Prevention of Sudden Cardiac Death**

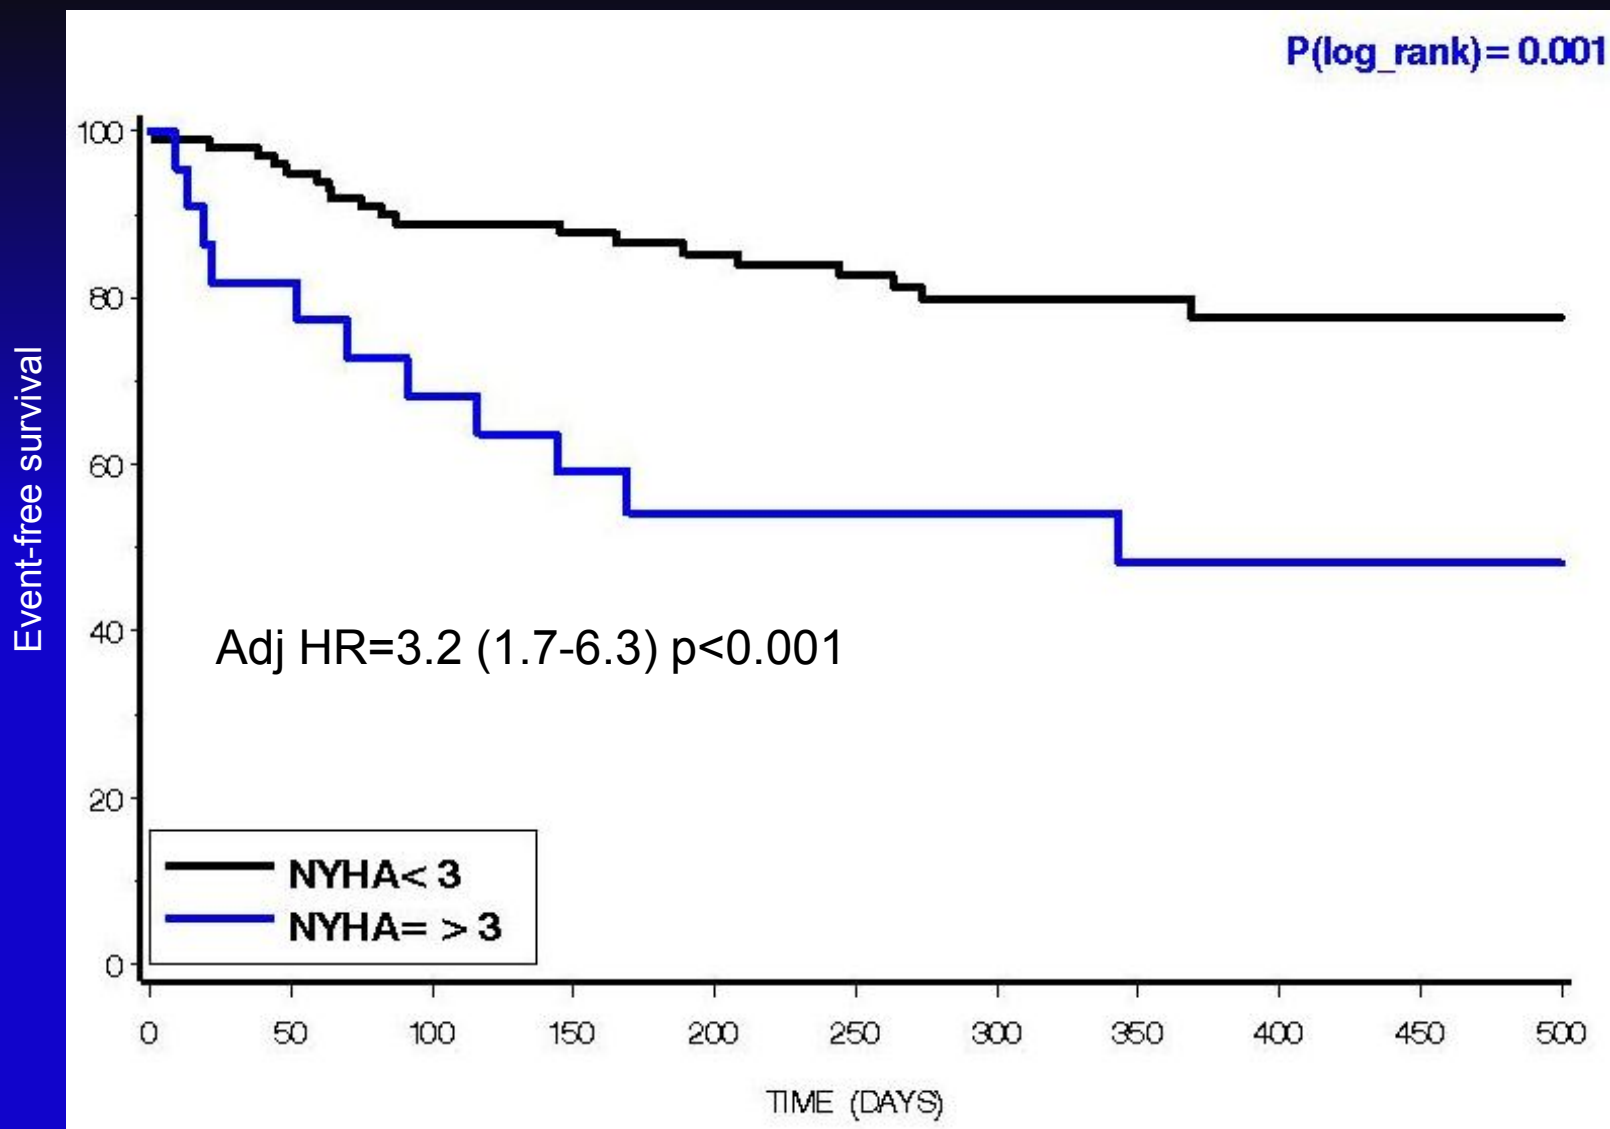

# Cumulative probability of HF or Death Total Population

# Cumulative probability of HF or death in ICD patients

# Cumulative probability of HF or death in CRTD patients

## Cumulative probability of death or appropriate device therapy for VT/VF

## NYHA change during FU

## Major Findings

- Patients with advanced HF who receive ICD for primary prevention of SCD are at increased risk of recurrent HF hospitalization
- High baseline NYHA class was not associated with recurrent HF hospitalization in patients implanted with CRTD
- Higher baseline NYHA was associated with reduced ventricular arrhythmias risk regardless of device type
- CRTD implantation was associated with higher rate of functional class improvement as compared to implantation of an ICD
