הערות למסמך ESC :Myocardial Revascularization

<http://www.escardio.org/guidelines-surveys/esc-guidelines/Pages/percutaneous-coronary-interventions.aspx>

מטעם האיגוד הקרדיולוגי בישראל

The Israel Heart Society is pleased to endorse the ESC guidelines for myocardial revascularization but would like to note 2 reservations:

1. The concept, structure and function of the "heart team" is left for individual medical centers to consider according to their specific situation.
2. Table 8 of the ESC document suggests that revascularization for symptoms should only be performed if the patient does not respond to optimal medical therapy. We feel revascularization can legitimately be added to optimal medical therapy as an initial strategy in selected patients after appropriate discussion of the risks and benefits with the patient.
