## **(Acute Coronary Syndrome Israeli Survey)**

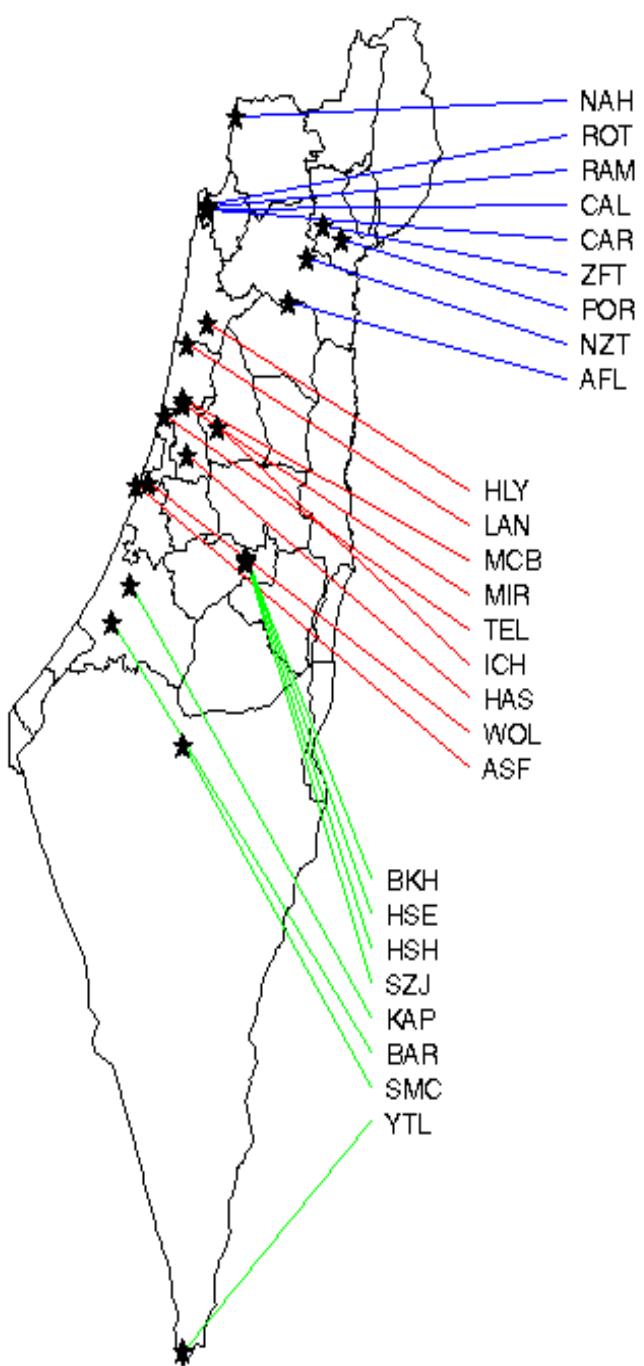

**Shmuel Gottlieb, MD**

Shaare Zedek Medical Center, Bikur Cholim Campus, Jerusalem,  
<sup>1</sup> and Neufeld Cardiac Research Institute, Tel-Hashomer, Israel

# ACSiS

ACSiS is a 2-month biennial nationwide ACS survey which documents all ACS pts who were admitted to each of the 26 cardiac departments in Israel.

**ACYSIS**

**26 Participating Centers**

**23 with Cath. Lab. Facilities**

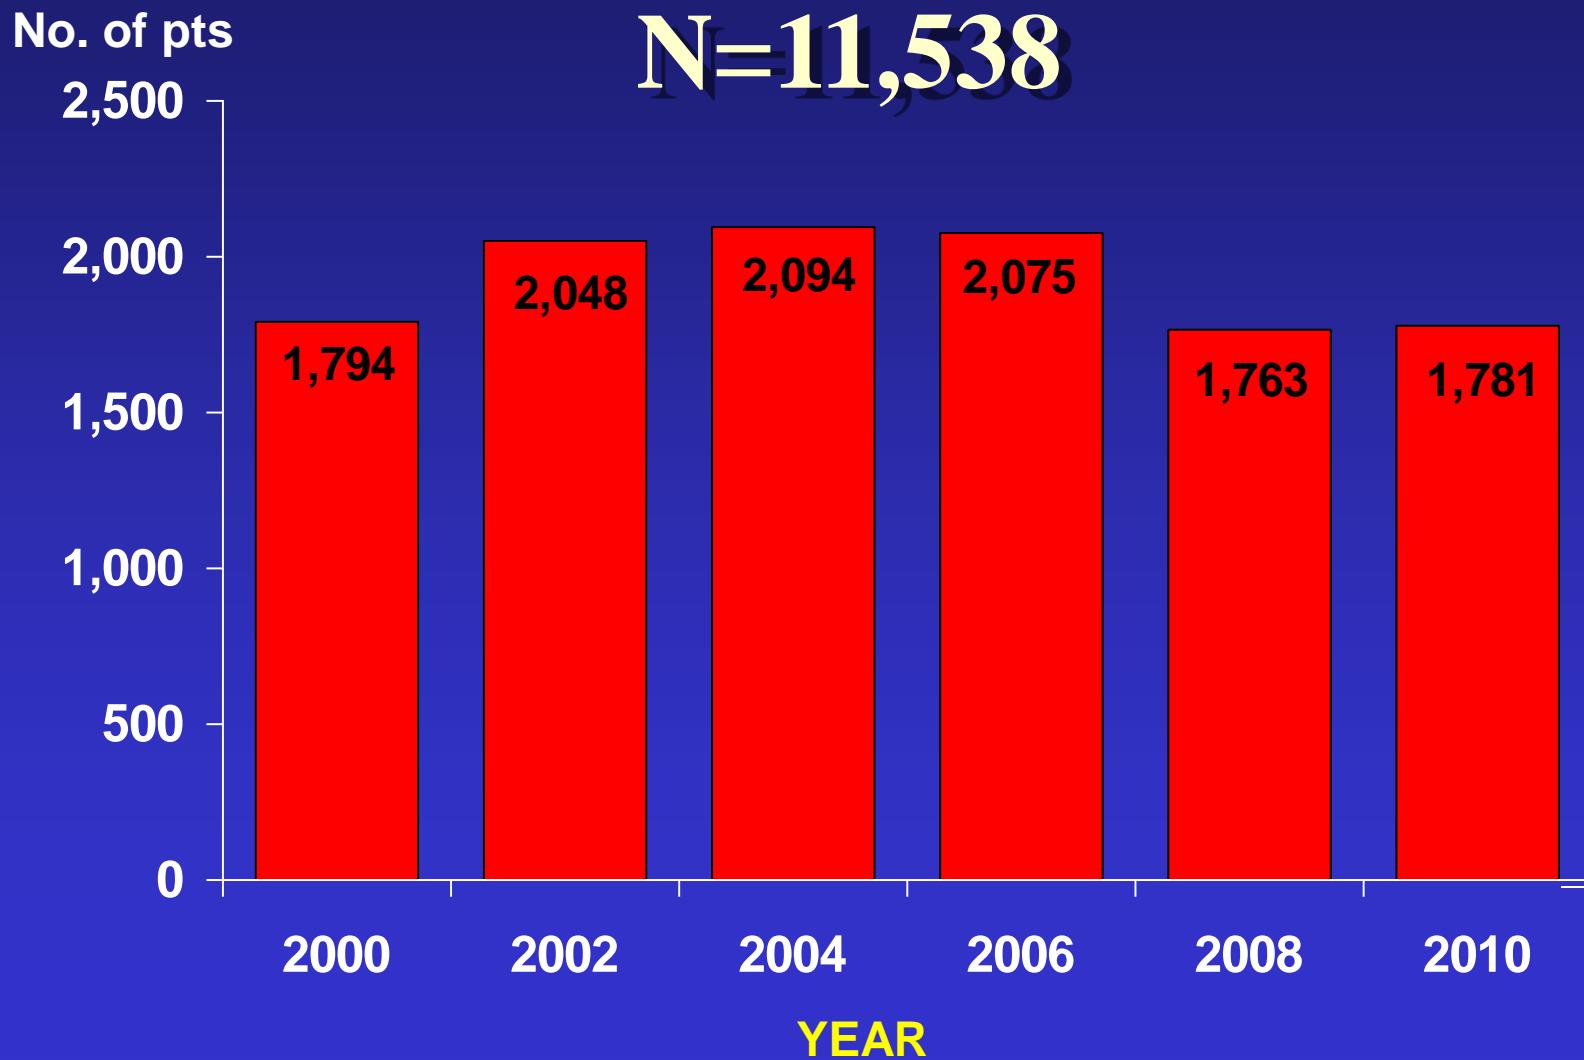

**10 with Cardiac Surgery Departments**

# **ACSIS - OBJECTIVES**

1. To assess the characteristics, management and outcome of patients with ACS in Israel.
2. To assess guidelines implementation in daily practice (“real world”).
3. To compare the present practice of ACS with data from previous surveys (Trends).

# Radial Approach

## ACSiS-PCI 2010

---

### Conclusions:

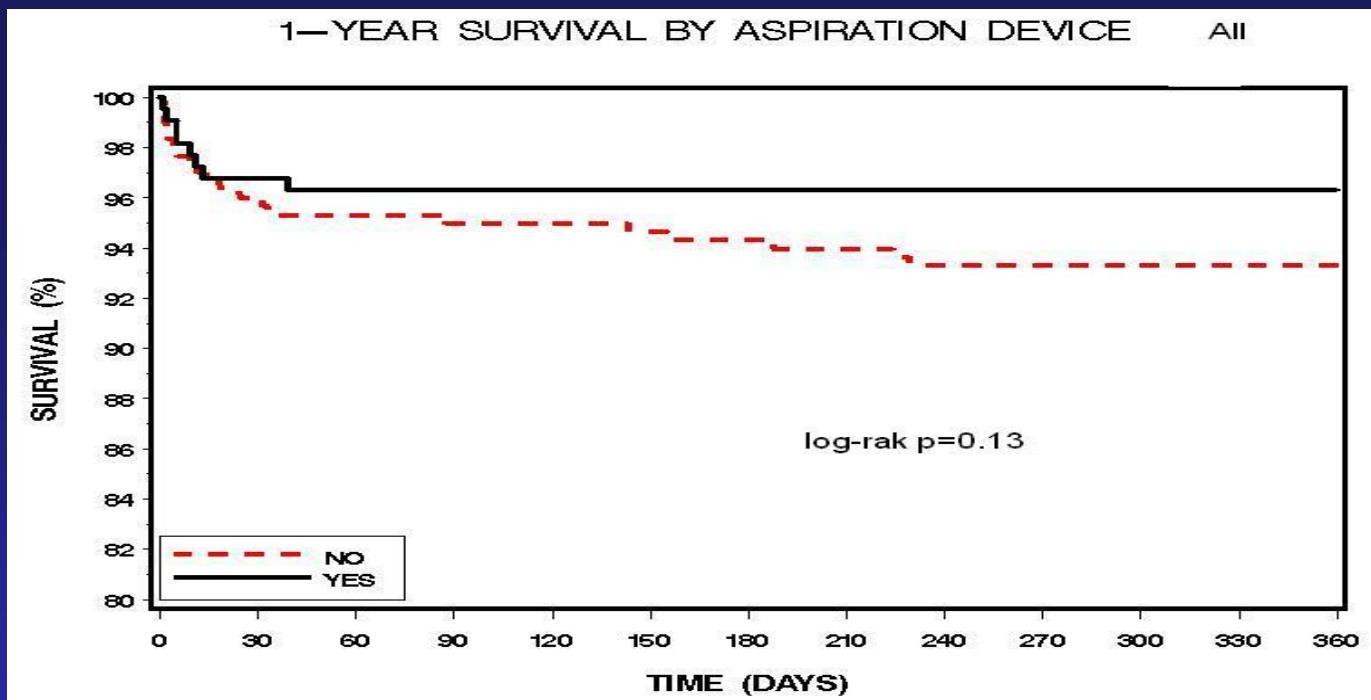

- Use of TRI seems to be associated with improved outcome in high-risk ACS pts.
- Our data suggest that in a real world setting this approach is underutilized.
- A more widespread adoption of TRI may reduce major bleeding events and improve outcomes in high-risk ACS patients.

# The Impact of Thrombus Aspiration on 1-year Mortality in Primary PCI for STEMI, ACSiS-PCI 2010 Experience

---

Patients who underwent TA-PPCI (217, 42%) vs. conventional (C)-PPCI were of similar age and had similar risk factors and history of coronary disease

# CONCLUSIONS

- ♥ ACSIS plays a major role in the assessment and improvement of quality of care provided to ACS patients in Israel.
- ♥ The high degree of implementation and adherence to recommended guidelines in recent years, was associated with a significant decline in early and late mortality, early complications, shorter length of stay, and a better LV function.

Are we Happy  
with these  
findings?

Can we further  
Improve our  
performance?

Yes !

Window cleaners, floor 101

Shanghai, World Trade and Financial Center,  
101-floors, 492-meter (1,614 foot) height, wedge-shaped tower

# How?

- ♥ Improve community care (primary and secondary prevention) with HMO providers
- ♥ Public campaign to shorten pre-hospital time delay
- ♥ Increase EMS use and improve triage
- ♥ Improve individual center quality
- ♥ Better triage and management of high risk NSTE-ACS pts and elderly
- ♥ Implementation of new medications and technologies
- ♥ Rehab. program
- ♥ Blood Samples (PK, PD, Genetics)

Thank  
you
