# Acute Heart Failure: The Scope of the Problem

Prof Avraham Shotan

## Eugene Braunwald: Clinical Manifestation of Heart Failure

### Acute vs Chronic Heart Failure

- ◀ The clinical manifestations of HF depend importantly on the **rate** the syndrome **develops** and specifically on whether **sufficient time** has elapsed for **compensatory mechanisms** to become operative ...
- ◀ When a previously normal person **suddenly** develops a serious **anatomical** or **functional abnormality** ... either a marked **sudden reduction in cardiac output** with symptoms due to **inadequate organ perfusion** and/or **acute congestion** ...
- ◀ If the same anatomical abnormality develops **gradually**, or if the patient **survives the acute insult** a host of **compensatory mechanisms develop** ...

# Heart Failure Management – Diagnosis and treatment

## 2013 ACCF/AHA Guideline for the Management of Heart Failure

A Report of the American College of Cardiology Foundation/  
American Heart Association Task Force on Practice Guidelines

*Developed in Collaboration With the American College of Chest Physicians, Heart Rhythm Society  
and International Society for Heart and Lung Transplantation*

*Endorsed by the American Association of Cardiovascular and Pulmonary Rehabilitation*

WRITING COMMITTEE MEMBERS\*

Clyde W. Yancy, MD, MSc, FACC, FAHA, Chair†‡;

# Acute Heart Failure

## 8. The Hospitalized Patient

- HF is the leading cause of hospitalization among pts >65 yrs.
- Recurrent hospitalizations – 50% at 6 months
- 1-year mortality ~30%

# **Acute Heart Failure**

## **8. The Hospitalized Patient**

- **Acute HF syndromes**
- **Acute decompensated HF**
- **Acute de novo HF**

**Hospitalized pts with HF can be classified into important subgroups:**

- **Acute coronary ischemia**
- **Accelerated hypertension**
- **Acutely decompensated HF**
- **Shock**
- **Acutely worsening right HF**
- **HF decompensation after surgical procedures**

**Each HF category has specific etiologic factors leading to decompensation, presentation, management and outcomes**

# Initial assessment of patient with suspected acute heart failure

## Suspected acute heart failure

History / examination  
(including blood pressure and respiratory rate)

ChestX-ray	ECG
Echocardiogram or NP (or both)	Oxygen saturation
Blood chemistry	Full blood count

**Simultaneously assess for**

Ventilation/  
systemic  
oxygenation  
inadequate

Life-threatening  
arrhythmia/  
bradycardia

Blood pressure  
< 85 mmHg  
or shock

Acute  
coronary  
syndrome

Acute  
mechanical  
cause / severe  
valvular disease

**Urgent action  
if present**

- Oxygen
- NIV
- ETT and invasive ventilation

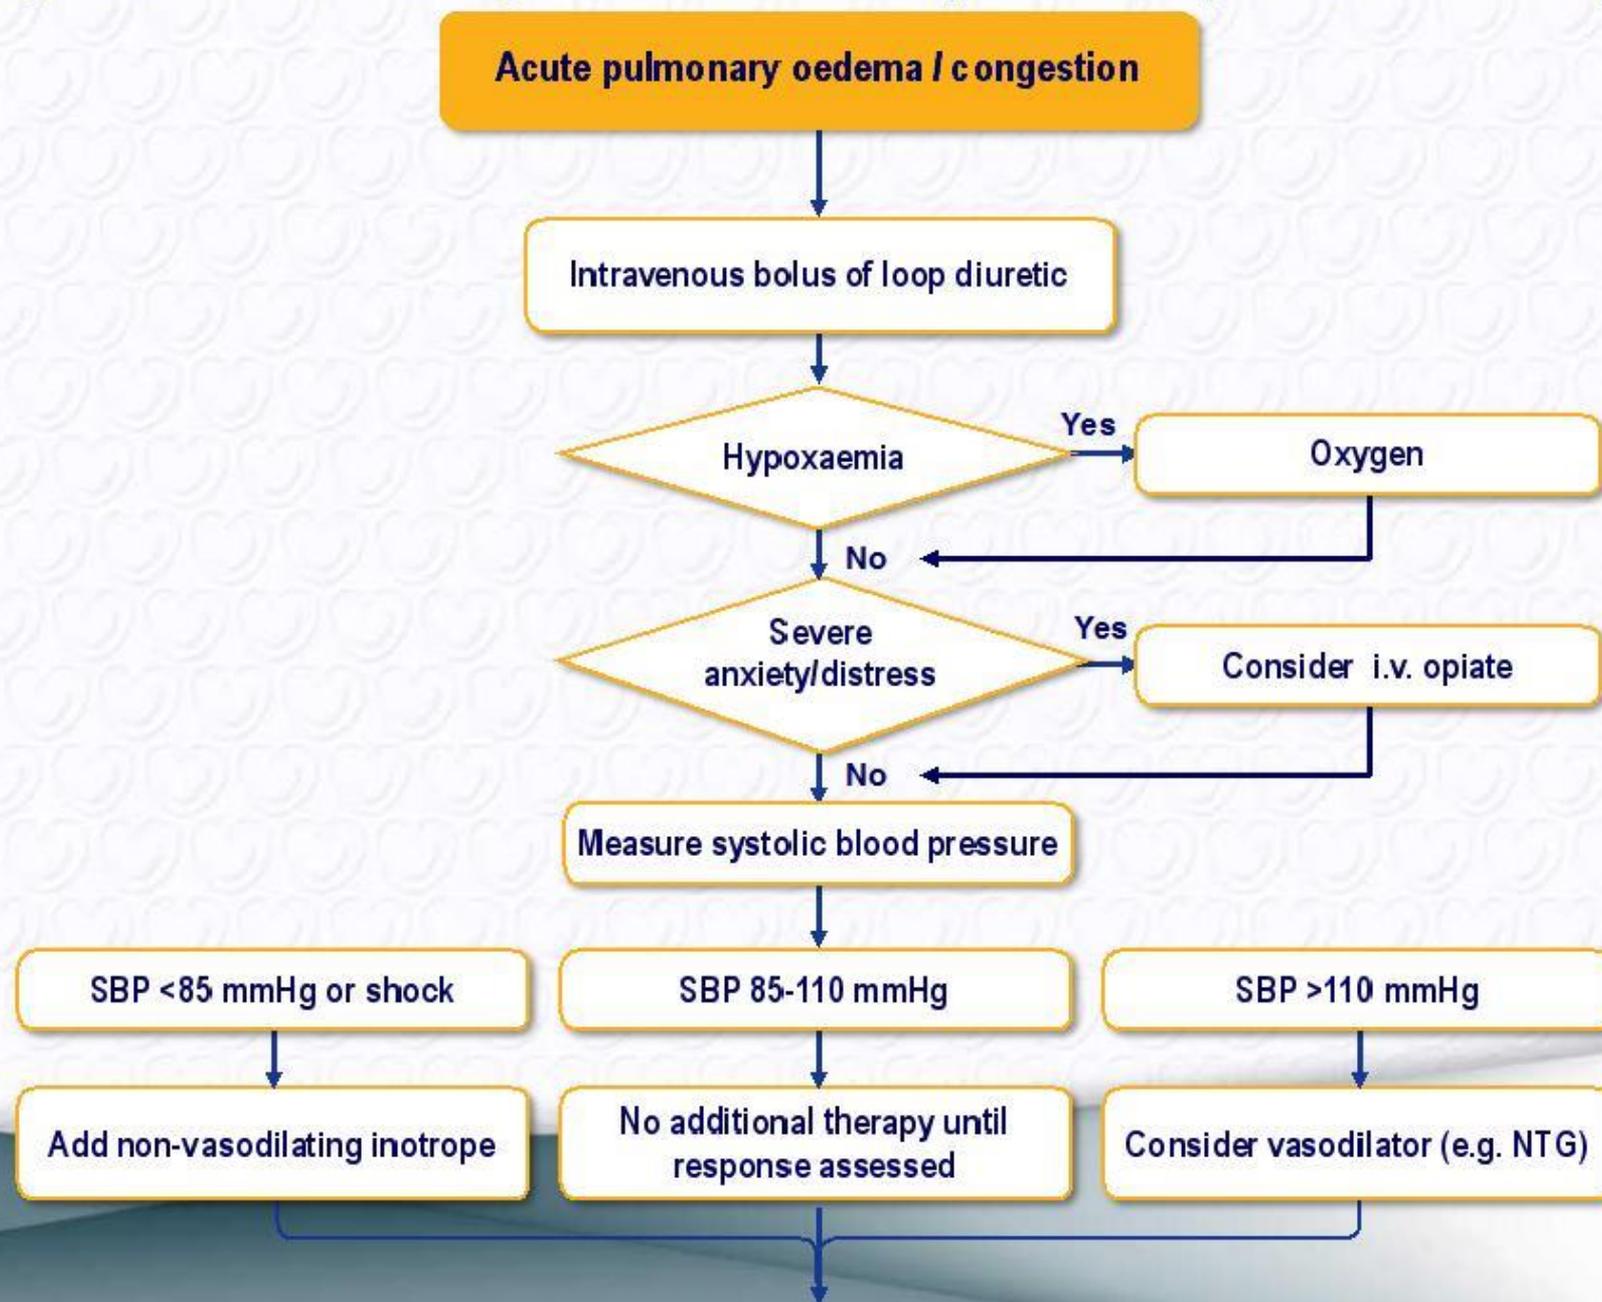

- Electrical cardioversion
- Pacing

- Inotrope/  
vasopressor
- Mechanical circulatory support (e.g. IABP)

- Coronary reperfusion
- Antithrombotic therapy

- Echo-cardiography
- Surgical/  
percutaneous intervention
